Why is it worth considering the installation of systems that automate the internal transport of goods in your production?

Cargo handling covers a significant percentage of intralogistics costs. The way of managing the flow of goods has undergone huge transformations in recent years along with the spread of automated systems.

Logistics automation is especially recommended in production with a large number of repetitive operations, because it guarantees a number of benefits in the long term.

A number of devices designed by us included in the system allow for the maximum reduction of logistics costs.

Shorten the path that your crops must travel.

Transport the harvested fruit and vegetables faster to the sorting and packing area.

Minimize the physical work associated with moving boxes or cartons by employees by using electric and autonomous AGVs.

Pack the goods using machines into ready-made pallets and transport the fruit and vegetables to their destination.
